# Memorandum

OS M64-1004

TO : Chief, Communications Division, OSA,  
DD/S&T

DATE: 15 October 1964

FROM : Chief, Operations Support Staff, OC

SUBJECT: Delivery of RS-54 Radio Sets

REF : OSA 4484-64

1. The RS-54 manufacturer has been contacted and has agreed to deliver three RS-54 sets in time to meet the OSA 26 October deadline. Immediately upon receipt, these sets will be delivered to OSA. The time element will not permit other than an extremely limited check of these sets by OC. Because of this, and in view of the fact that the units are prototypes, if time permits after these sets are delivered to you we strongly recommend that your technicians evaluate this equipment against the proposed use to which the sets will be put.

2. January delivery of production units depends entirely upon the results of the evaluation of the prototypes which OC is to receive about 1 November. Should the evaluation indicate that more work needs to be done on this transceiver before full production can begin, this will of course delay delivery. However, this Office will do everything possible to insure that RS-54 systems are delivered on schedule.
